Practice Async #1.2

API Requests sync and async

Use **RestSharp(install from Nuget)**

☐ RestClient **sync** operation for getting the employees
GET "http://dummy.restapiexample.com/api/v1/employees"

☐ Change to async behaviour: use Task, await, async

☐ Use stopwatch elapsed time

☐ Call API to Create new employee - Change GET to **POST**
POST http://dummy.restapiexample.com/api/v1/create

☐ Compare performance sync vs async

Notes

RestSharp is more powerful than WebClient due to the serialization/deserialization
implementation for Json

Performance:
async should take less time
